

## CLAIMS

What Is Claimed Is:

1. A remote control stand for releasably holding at least one remote control and  
5 facilitating directional control of signal transmissions from the remote control, said stand comprising:
  - a base;
  - means, extending from said base, for supporting at least one remote control;
  - means for releasably mounting at least one remote control to said support
  - 10 means;
  - means for directing signal transmissions from the remote control toward electronic equipment to be controlled.
2. A stand as recited in claim 1, wherein said base is rotatable.
- 15 3. A stand as recited in claim 1, further comprising:
  - a height adjustable stand for resting the base and adjusting height.
4. A stand as recited in claim 1, wherein said means for directing signal  
20 transmissions is adjustable.
5. A stand as recited in claim 1, wherein said means for directing signal transmissions comprises:

a least one optical wave guide having an optical input, optical output and at least one light reflective surface between said input and output.

6. A stand as recited in claim 1, further comprising:

5 a lamp socket for mechanically and electrically supporting a light bulb; and means for providing electrical power to said lamp socket.

7. A stand as recited in claim 1, wherein said means for supporting comprises:

10 a top plate releasably secured to a center rod, said center rod extending between said base and said top plate.

8. A stand as recited in claim 1, wherein said means for releasably mounting at least one remote control comprises:

15 a hook-and-loop fastener.

9. A stand as recited in claim 1, wherein said means for directing comprises:

a remote control holding plate rotatably mounted to said supporting means, said plate being rotatable upward and downward.

20 10. A remote control stand for releasably holding at least one remote control, said stand comprising:

a base;

an adjustable pole secured to said base;

a bracket rotatably mounted to said pole for facilitating substantially horizontal adjustment;

a remote control holder rotatably mounted to said bracket for adjusting the pitch of said remote control holder; and

5 clamp means for mounting at least one remote control to said holder.

11. A stand as recited in claim 10, wherein said adjustable pole is telescopic.

12. A stand as recited in claim 10, wherein said adjustable pole comprises a  
10 plurality of releasably connecting rods.
